

# solarflec **TEX**

BRAND FABRIC

The only exterior shade fabric engineered with solar reflective technology.

**Energy Saving**

**Reduce Heat Absorption**

**Scientifically Developed**

**15**

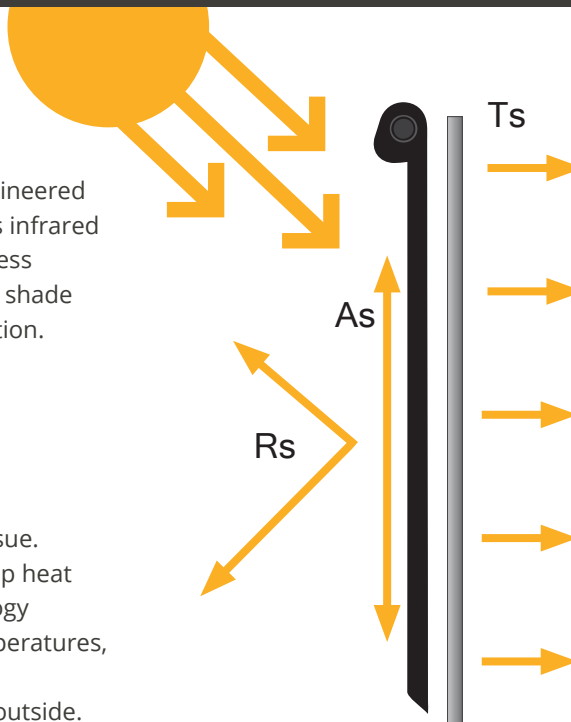

**Year Warranty**

## Color No Longer Limits Design Options.

**SolarflecTEX™** - The first exterior shade fabric engineered with solar reflective technology to reduce the sun's infrared energy absorption by dark colors while providing less interior heat transfer. Offering more exterior solar shade color options without worrying about heat absorption.

## Stop The Heat Before It Enters The Window.

With the increased demand for large windows and doors, higher interior heat transfer becomes an issue. Exterior screens protect against glare but don't stop heat absorption. Textilene with **SolarflecTEX™** technology creates a barrier to help maintain lower glass temperatures, less interior heating; reduced energy cost; a more comfortable environment with an enhanced view outside.
